KEY ACHIEVEMENTS

- Optimized a critical high-volume data-retrieval API, **reducing worst-case latency by 80% (15s to under 3s)** by eliminating full-collection scans through nested-document indexing and CompletableFuture parallelism
- Decreased production exceptions by **50%** under a Kaizen initiative and cleared **600+ SonarQube issues**
- Resolved a production data mapping incident **affecting 3000+ policies**, restoring end-to-end data integrity
- Received the **Excellence Award (FY25–26)** from Axis Max Life Insurance for outstanding performance on the MPro project

EXPERIENCE

Monocept

Nov 2024 – Present

Software Engineer | Client: Axis Max Life Insurance | Project: MPro

Hyderabad, India

- Built a **configuration-driven product onboarding system** (Coherent Spark to JSON on AWS S3, delivered via CloudFront) across **12 insurance products**, and migrated plan code assignment to plancode.json, **eliminating 3–4 DB calls per policy**
- Migrated the superannuation flow (group/business policies) onto the Falcon track via configuration-driven APIs, enabling product setup without code changes
- Implemented proposal data mapping between mSales (external application) and MPro across multiple products, ensuring data parity between source and target systems
- Extended wrapper APIs with Benefit Illustration support for fintech and insurance aggregator integrations
- Developed a policy retrieval flow accepting policy number, PAN, or phone number with date of birth, **prefilling 90% of a 6-stage journey** and secured via Redis-based OTP verification
- Owned production support, hotfix deployments, and hypercare reporting; monitored logs via Kibana and CloudWatch and managed CI/CD pipelines in GitLab and Jenkins

Software Intern

May 2024 – Nov 2024

- Built full-stack modules for an insurance management system using Spring Boot, React, MySQL, and Redis, covering core policy and customer flows
- Implemented JWT authentication and Spring Security role-based access control across multiple user roles
- Designed RESTful APIs for policy, claims, and payment workflows, tuning MySQL queries with indexing for faster reporting

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, HTML, CSS

Backend: Spring Boot, Spring Security, Microservices, JWT Authentication, JPA

Databases: MySQL, MongoDB, Redis

Cloud (AWS): EC2, S3, RDS, CloudFront, CloudWatch, IAM, Parameter Store

Frontend: React

Tools & Practices: Git, GitLab, Jenkins, Docker, Postman, Swagger, Kibana, Dynatrace, SonarQube, Jira, Agile, SOLID Principles

PROJECTS

TicketHub | *Spring Boot, MySQL, Redis, Docker, AWS*

May 2026 – Present

- Building a full-stack event-booking application (Spring Boot, MySQL) with concurrency-safe seat reservation to prevent double-booking
- Using Redis to cache frequently accessed event data, with JWT and Spring Security for authentication
- Containerizing the application with Docker and deploying on AWS, with REST APIs documented via Swagger

EDUCATION

Anurag University

Nov 2020 – Jun 2024

B.Tech in Artificial Intelligence, CGPA: 7.9

Hyderabad, India
